

VP Link™ 3.0

The Sensible Simulation Environment for **Invensys A²**

VP Link *connects* to your offline System
to simulate dynamic process responses

Testing

A customized VP Link testing environment is developed before the FAT, in order to facilitate simulated process responses and failure scenarios testing.

A Flexible Client/Server **VP Link** architecture allows for simultaneous testing phases, maximizing validation capability

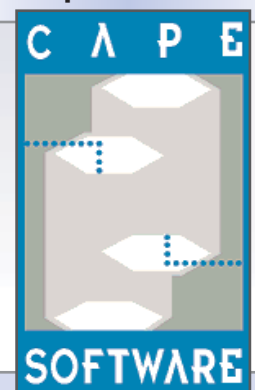

Training

Real field graphics (on the trainee console) and a highly **customizable** process models allows for a realistic training experience. In addition, real-world **process upsets** can be triggered by our Scoring Engine, or interactively by the trainer to further evaluate the trainees performances.

Interface

High-speed **OPC interface** and **AutoSim** contributes to a **seamless, non-invasive** simulation experience
